## CHALLENGES

### Infrastructure Bottleneck Crisis

Development teams lose \$2.5M annually per 100 developers as they spend 23% of their time on infrastructure provisioning and other DevOps tasks instead of building features.

### Manual Governance Overhead

Traditional infrastructure governance requires constant human intervention with 76% of organizations reporting cognitive overload from infrastructure complexity.

### Production Drift & Incidents

70% of production incidents stem from configuration drift and infrastructure changes, causing hours to days of resolution time.

### Unused Resource Cloud Costs

73% of cloud costs wasted on unused resources. Teams lack visibility into infrastructure sprawl, leading to massive overspending on idle resources and services.

## AGENTIC PLATFORM CAPABILITIES

### Infrastructure provisioning accelerates delivery by 95%

Aiden generates infrastructure code from natural language, validates configurations, and creates GitHub PRs for deployment.

### Proactive guardrails prevents 90% of vulnerabilities

Aiden continuously monitors infrastructure, flags governance and compliance risks, and suggests hardening improvements via PR.

### Automated incident diagnosis reduces MTTR by 50%

Aiden investigates root causes, provides remediation recommendations, and generates PRs for fixes.

### AI-powered optimization cuts cloud costs by 30%

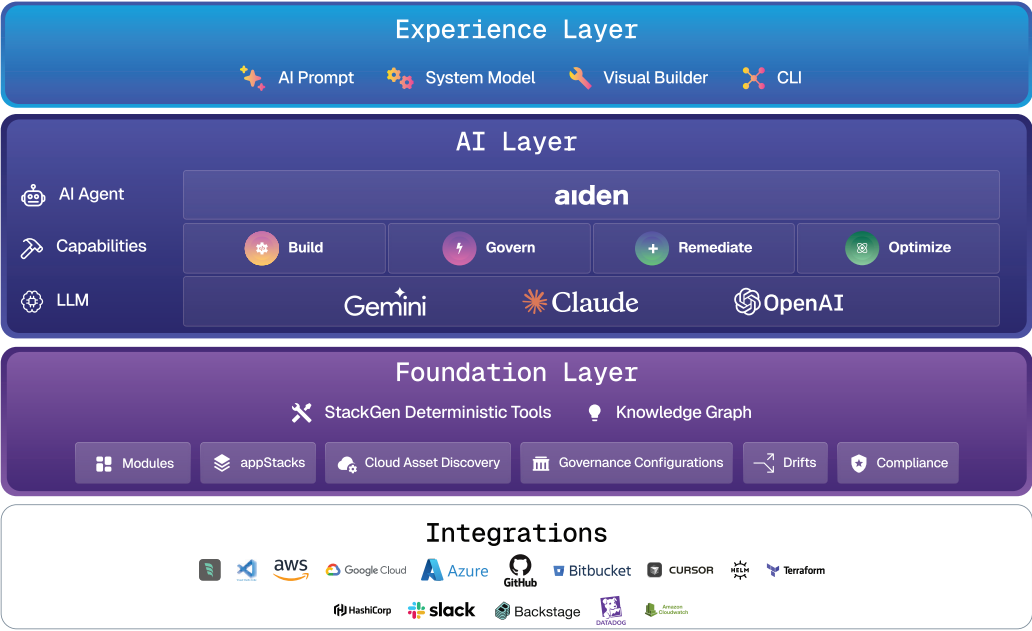

Aiden identifies wasteful resources, recommends rightsizing opportunities, and creates PRs for cost-saving changes.
