

Kiro Codes. Aiden Provisions. You Ship Faster.

Enable developers with scalable, automated infrastructure in Amazon Kiro IDE

KEY OUTCOMES

10x Faster Compliant Infrastructure

Kiro generates production-ready AWS code while Aiden auto-provisions infrastructure, eliminating manual setup and configuration.

95% Fewer Compliance Incidents

Kiro hands app code to Aiden to enforces governance policies automatically for that cloud deployment.

60% Faster Infrastructure Operations

Deploy, modify, and troubleshoot using natural language through Kiro's AI IDE and Aiden intelligent semantic engine.

DEVELOPER SELF-SERVICE WITH GRANULAR INFRASTRUCTURE CONTROL

PLATFORM TEAM-MANAGED BLUEPRINTS WITH GOVERNED SELF-SERVICE

STACKGEN MCP SERVER

Amazon Kiro agent leverage's StackGen's MCP server to perform powerful IaC actions

Tools	What	Prompt
appStacks	Create infrastructure appStacks based on the requirements of your app	"Give me the right appStack for my new payment service"
Governance	Apply entire governance sets to appStacks	"Apply APAC related rules to this project"
Custom Policies	Create custom policies and enforce them in appStacks	"Create a custom policy for EU users with these rules"
Compliance	Return list of resources compliance violations and fix them	"Which appStacks have compliance violations right now"
Custom Modules	Create IaC modules and apply them to appStacks	"Create 'static-content-repo' module that exposes 'ContentPath' and 'EnableCDN'"
Drift	Detect drift between current and desired infrastructure state	"Return list of appStacks that has drift"
