StackGen

AIDEN FOR INFRAOPS

Ship infrastructure at AI speed, governed by default

Infrastructure lifecycle management with developer experience to deploy guardrailed infra from IDE, Backstage or ServiceNow.

TRUSTED BY | innovaccer | Nielsen | NIQ | LOWE'S | Bancolombia

Customer Results

~40%	Estimated developer efficiency gain at a large LatAm bank[1]
<1 day	Governed AWS and Azure environments at Innovaccer[2]
~90%	Less time to codify 500+ cloud resources at a large enterprise[3]

Benefits

SELF-SERVICE

Developers use their own tools

Developers request infra from their IDE, coding agent, CLI or ServiceNow. No ticket queue.

STANDARDIZED

Built on approved modules

Every stack a developer receives comes from the approved golden modules, as standard Terraform or OpenTofu.

GUARDRAILS

Policy checked first

OPA runs at generation time. Non-compliant infra is rejected with the reason and the fix before developers deploy.

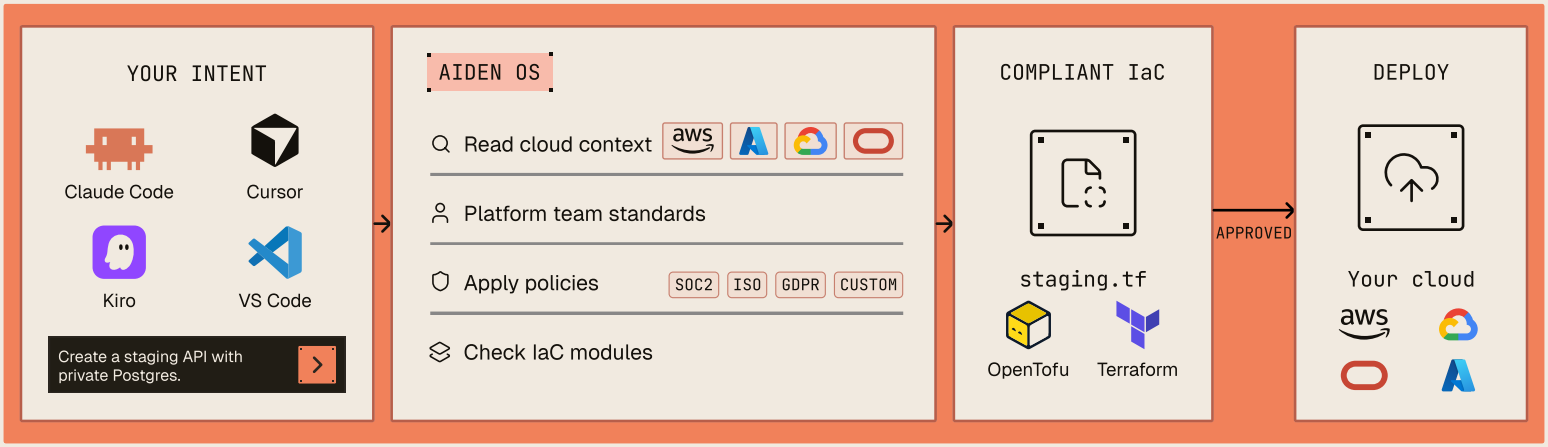

DAY 2

Deploy & fix drift

Developers deploy; Aiden applies the OpenTofu and continuously monitors. Drift is caught as a CI/CD gate.

How it works

Intent to governed cloud deployment

> StackGen's Aiden for InfraOps gives our engineering teams a governed way to provision cloud infrastructure, while our close collaboration with StackGen is helping shape the platform around the requirements of a complex, multi-account environment.
