StackGen

AIDEN FOR OBSERVABILITY

Unified Observability at scale

Fully managed, open-standards observability with your existing dashboards and AI-correlated logs, metrics, traces and APM, all under one agentic interface. Replace self-hosted complexity with intelligent analysis at 50% lower cost.

TRUSTED BY | Nielsen · INMOBI · AUTODESK · SAP NS2 · CHAMBERLAIN · Piramal

Proof from Production

In production at a global SaaS enterprise[1]

10 TB+	640	~250	3,000	220K
Logs ingested per day on ObserveNow	Grafana dashboards hosted and managed	Engineers self-serving SLO and latency data	Alerts configured and monitored	Read queries served per day

Benefits

UNIFIED
Unified observability
Metrics, logs, traces and APM in one pane, on a managed OpenTelemetry, Grafana and Prometheus stack.

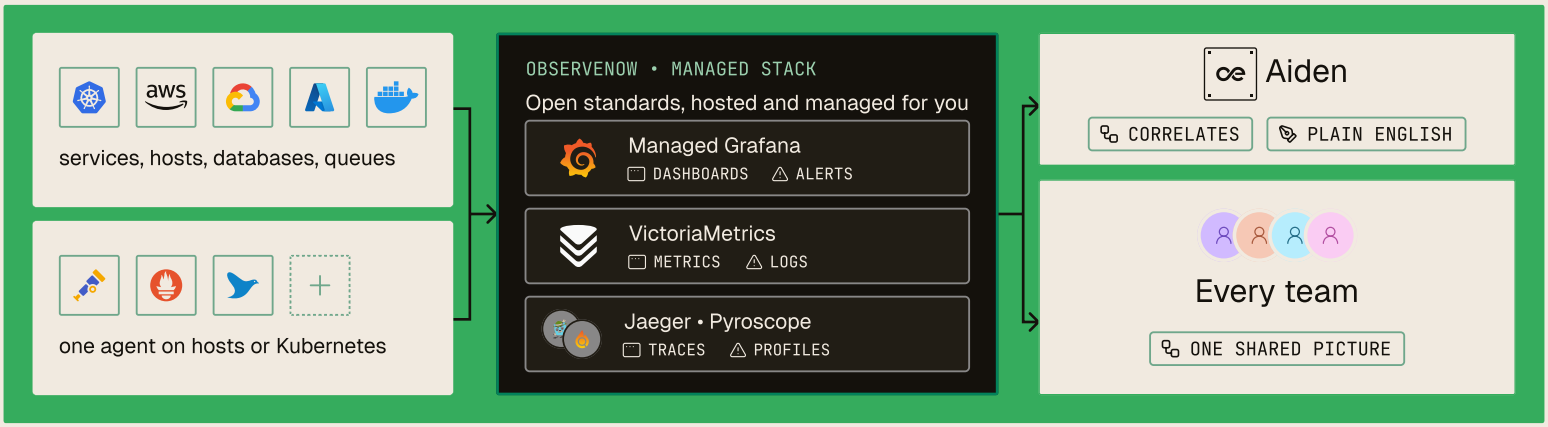

CORRELATED
Connected signals
Correlates alerts with deployments and change events, with anomaly detection across every signal.

PLAIN ENGLISH
Plain-English answers
Ask questions, build dashboards and set alerts in plain English. No query language to learn.

YOUR BOUNDARY
Your data, your boundary
Public cloud, private SaaS, on prem or hybrid. Telemetry stays inside your network boundary.

How it works

1. **Connect** — Point OTel, Prometheus, Fluentd and more exporters to ObserveNow
2. **Ingest** — Logs, metrics, traces and APM flow into a single platform
3. **Correlate** — Aiden surfaces anomalies and correlates signals across the stack
4. **Alert & Track** — Pre-built alert rules with SLO management and error budgets

> Aiden transformed how our engineers interact with observability. Natural language insights replaced complex queries and reduced dependency on SREs.
>
> ABHISHEK GAURAV, HEAD OF ENGINEERING & DEVOPS, GREYTHR
